

This is the basic standard power supply. It is used when the installation has no PVs and the customer wants the units to run solely on domestic power.

This is the standard power supply paired with one Constant Current Module (CCM). This set up is used when you are powering one fan.
The CCM can be mounted either inside the box or on the fan's motor arm.

This is the standard power supply paired with two Constant Current Modules (CCMs). This set up is used when you are powering two fans.
The CCMs can be mounted either inside the box or on the fan's motor arms. More photos and descriptions for this to come.
